

Did you know ?

- 98% of all sunscreens contain ingredients that are harmful to human health and to the marine ecosystems.
- Oxybenzone and Octinoxate, chemical compounds found in over 3500 sunscreen brands worldwide are causing hormones disruption and skin allergy.
- The hormones most commonly disturbed are estrogen, progesterone, testosterone and thyroid.
- Endocrine disruptors can cause abnormal development of fetuses and growing children and might also cause cancer while not proven yet.
- Every year 14 000 tons of sunscreen end up into the ocean with devastating effects on the marine life. Wildlife and flora are heavily disturbed and destroyed at an alarming rate.

Solutions

- Our sunscreen is eco-friendly and without toxic chemicals affecting human health and the biodiversity.
